# Application of S-boxes

Figure : A Substitution Box

# Properties of substitutions

Arbitrary substitution can be represented as the system of equations

$$\begin{cases} g_1(x_1, x_2, \dots, x_n, y_1, y_2, \dots, y_m) = 0; \\ g_2(x_1, x_2, \dots, x_n, y_1, y_2, \dots, y_m) = 0; \\ \dots \\ g_r(x_1, x_2, \dots, x_n, y_1, y_2, \dots, y_m) = 0. \end{cases} \quad (1)$$

# Properties of substitutions

Arbitrary substitution can be represented as the system of equations

$$\begin{cases} g_1(x_1, x_2, \dots, x_n, y_1, y_2, \dots, y_m) = 0; \\ g_2(x_1, x_2, \dots, x_n, y_1, y_2, \dots, y_m) = 0; \\ \dots \\ g_r(x_1, x_2, \dots, x_n, y_1, y_2, \dots, y_m) = 0. \end{cases} \quad (1)$$

## Algebraic immunity

The algebraic immunity  $AI(F)$  of any  $(n, m)$ -function  $F$  is the minimum algebraic degree of all functions in (1).

# Properties of substitutions

Arbitrary substitution can be represented as the system of equations

$$\begin{cases} g_1(x_1, x_2, \dots, x_n, y_1, y_2, \dots, y_m) = 0; \\ g_2(x_1, x_2, \dots, x_n, y_1, y_2, \dots, y_m) = 0; \\ \dots \\ g_r(x_1, x_2, \dots, x_n, y_1, y_2, \dots, y_m) = 0. \end{cases} \quad (1)$$

## Algebraic immunity

The algebraic immunity  $AI(F)$  of any  $(n, m)$ -function  $F$  is the minimum algebraic degree of all functions in (1).

## Minimum degree

The minimum algebraic degree of all the component functions of  $F$  is called the minimum degree.

# List of properties

## Definition

An  $S$ -box is a mapping of an  $n$ -bit input message to an  $m$ -bit output message.

- Minimum degree
- Balancedness
- Nonlinearity
- Correlation immunity
- $\delta$ -uniformity
- Cyclic structure
- Algebraic immunity
- Absolute indicator
- Absence of fixed points
- Propagation criterion
- Sum-of-squares indicator
- ...

# Necessary properties for stream ciphers (FG)

## Definition

An  $S$ -box is a mapping of an  $n$ -bit input message to an  $m$ -bit output message.

- Minimum degree
- Balancedness
- Nonlinearity
- Correlation immunity
- $\delta$ -uniformity
- Cyclic structure
- Algebraic immunity
- Absolute indicator
- Absence of fixed points
- Propagation criterion
- Sum-of-squares indicator
- ...

# Necessary properties for block ciphers

## Definition

An  $S$ -box is a mapping of an  $n$ -bit input message to an  $m$ -bit output message.

- Minimum degree
- Balancedness
- Nonlinearity
- Correlation immunity
- $\delta$ -uniformity
- Cyclic structure
- Algebraic immunity
- Absolute indicator
- Absence of fixed points
- Propagation criterion
- Sum-of-squares indicator
- ...

# Perfect substitutions

## Definition

An  $S$ -box is a mapping of an  $n$ -bit input message to an  $m$ -bit output message.

- Minimum degree
- Balancedness
- Nonlinearity
- Correlation immunity
- $\delta$ -uniformity
- Cyclic structure
- Algebraic immunity
- Absolute indicator
- Absence of fixed points
- Propagation criterion
- Sum-of-squares indicator
- ...

## Definition

Substitutions satisfying only mandatory criteria essential for a particular cryptographic algorithm are called optimal.

# Optimal substitutions

## Definition

Substitutions satisfying only mandatory criteria essential for a particular cryptographic algorithm are called optimal.

An optimal substitution for a block cipher

- permutation
- maximum value of minimum degree
- without fixed points (cycles of length 1)
- maximum algebraic immunity/minimum number of equations

## Definition

Substitutions satisfying only mandatory criteria essential for a particular cryptographic algorithm are called optimal.

An optimal substitution for a block cipher

- permutation
- maximum value of minimum degree
- without fixed points (cycles of length 1)
- maximum algebraic immunity/minimum number of equations
  - minimum  $\delta$ -uniformity
  - maximum nonlinearity

## Definition

Substitutions satisfying only mandatory criteria essential for a particular cryptographic algorithm are called optimal.

An optimal **permutation** for a block cipher

- ~~permutation~~
- maximum value of minimum degree
- ~~without fixed points (cycles of length 1)~~
- maximum algebraic immunity/~~minimum number of equations~~
  - minimum  $\delta$ -uniformity
  - maximum nonlinearity

# Example of criteria for $n = m = 8$

An optimal **permutation without fixed points** must have

- minimum degree 7
- algebraic immunity 3 (441 equations)
- $\delta \leq 8$
- $NL \geq 100$

# Random method

## Algorithm

Generate random permutation and check for optimality.

# Random method

## Algorithm

Generate random permutation and check for optimality.

## Practical result

After 12 hours of cluster operation (4096 cores) it was found 27 optimal permutations (with  $NL = 100$ ), four of them were CCZ-nonequivalent.

# Random method

## Algorithm

Generate random permutation and check for optimality.

## Practical result

After 12 hours of cluster operation (4096 cores) it was found 27 optimal permutations (with  $NL = 100$ ), four of them were CCZ-nonequivalent.

## Restrictions

After 48 hours of cluster operation (22 years on 1 core), no substitutions with  $NL = 102$  were found.

# Problem 1

Are such substitutions the best?

# Problem 1

Are such substitutions the best?

No. Counterexample was given in STB 34.101.31-2011. The optimal substitution has  $NL = 102$ .

# Problem 1

Are such substitutions the best?

No. Counterexample was given in STB 34.101.31-2011. The optimal substitution has  $NL = 102$ .

How to generate such substitutions?

# Problem 1

Are such substitutions the best?

No. Counterexample was given in STB 34.101.31-2011. The optimal substitution has  $NL = 102$ .

How to generate such substitutions?

Answer: "A Method For Generation Of High-Nonlinear S-Boxes Based On Gradient Descent".

# Problem 1

## Are such substitutions the best?

No. Counterexample was given in STB 34.101.31-2011. The optimal substitution has  $NL = 102$ .

## How to generate such substitutions?

Answer: "A Method For Generation Of High-Nonlinear S-Boxes Based On Gradient Descent" (2013) and "A New Method for Generating High Non-linearity S-Boxes" (2010).

# Problem 1

## Are such substitutions the best?

No. Counterexample was given in STB 34.101.31-2011. The optimal substitution has  $NL = 102$ .

## How to generate such substitutions?

Answer: "A Method For Generation Of High-Nonlinear S-Boxes Based On Gradient Descent" (2013) and "A New Method for Generating High Non-linearity S-Boxes" (2010).

## Improvements

# Problem 1

## Are such substitutions the best?

No. Counterexample was given in STB 34.101.31-2011. The optimal substitution has  $NL = 102$ .

## How to generate such substitutions?

Answer: "A Method For Generation Of High-Nonlinear S-Boxes Based On Gradient Descent" (2013) and "A New Method for Generating High Non-linearity S-Boxes" (2010).

## Improvements

- 1 How to predict the number of swapping points?

# Problem 1

## Are such substitutions the best?

No. Counterexample was given in STB 34.101.31-2011. The optimal substitution has  $NL = 102$ .

## How to generate such substitutions?

Answer: "A Method For Generation Of High-Nonlinear S-Boxes Based On Gradient Descent" (2013) and "A New Method for Generating High Non-linearity S-Boxes" (2010).

## Improvements

- 1 How to predict the number of swapping points?
- 2 Predict properties of the substitution after  $NP$  exchanges.

# Problem 1

## Are such substitutions the best?

No. Counterexample was given in STB 34.101.31-2011. The optimal substitution has  $NL = 102$ .

## How to generate such substitutions?

Answer: "A Method For Generation Of High-Nonlinear S-Boxes Based On Gradient Descent" (2013) and "A New Method for Generating High Non-linearity S-Boxes" (2010).

## Improvements

- 1 How to predict the number of swapping points?
- 2 Predict properties of the substitution after  $NP$  exchanges.
- 3 Faster algorithm.

# Comparison with known substitutions

Properties	AES	GOST	STB	Kalyna	New
$\delta$ -uniformity	4	8	8	8	8
Nonlinearity	112	100	102	96	104
Absolute Indicator	32	96	80	88	80
SSI	133120	258688	232960	244480	194944
Minimum Degree	7	7	6	7	7
Algebraic Immunity	2/39	3/441	3/441	3/441	3/441

Table : Comparison of Substitutions

# Problems

## Problem 2

Find the upper bound of nonlinearity for optimal  $F : \mathbb{F}_2^n \mapsto \mathbb{F}_2^n$ .

## Problem 2

Find the upper bound of nonlinearity for optimal  $F : \mathbb{F}_2^n \mapsto \mathbb{F}_2^n$ .

- Prove that for  $n = 8$   $NL(F) = 104$  is the maximum value with optimal properties.

# Problems

## Problem 2

Find the upper bound of nonlinearity for optimal  $F : \mathbb{F}_2^n \mapsto \mathbb{F}_2^n$ .

- Prove that for  $n = 8$   $NL(F) = 104$  is the maximum value with optimal properties.

## Problem 3

Find a class of  $F : \mathbb{F}_2^n \mapsto \mathbb{F}_2^{2n}$  with  $\#img(F) = 2^n$ ,  $\delta = 2$  and maximum nonlinearity.

# Problems

## Problem 2

Find the upper bound of nonlinearity for optimal  $F : \mathbb{F}_2^n \mapsto \mathbb{F}_2^n$ .

- Prove that for  $n = 8$   $NL(F) = 104$  is the maximum value with optimal properties.

## Problem 3

Find a class of  $F : \mathbb{F}_2^n \mapsto \mathbb{F}_2^{2n}$  with  $\#img(F) = 2^n$ ,  $\delta = 2$  and maximum nonlinearity.

- Give an example for  $n = 8$  or  $n = 10$ .

# Problems

## Problem 2

Find the upper bound of nonlinearity for optimal  $F : \mathbb{F}_2^n \mapsto \mathbb{F}_2^n$ .

- Prove that for  $n = 8$   $NL(F) = 104$  is the maximum value with optimal properties.

## Problem 3

Find a class of  $F : \mathbb{F}_2^n \mapsto \mathbb{F}_2^{2n}$  with  $\#img(F) = 2^n$ ,  $\delta = 2$  and maximum nonlinearity.

- Give an example for  $n = 8$  or  $n = 10$ .

## Conjecture

APN permutations over  $\mathbb{F}_{2^n}$  ( $n = 2k$ ) exist iff they exist in a subfield.

## Information

From the 1st of January 2013 there are two new standards GOST R 34.10-2012 and GOST R 34.11-2012.
